Programming Languages

- C#
- Java
- C++
- GDScript
- PHP
- SQL

Software Tools

- Unity
- Godot
- Visual Studio
- GitHub

Languages

Portuguese	Native
English	C1/C2
Spanish	B1
French	A2

Experience

Gameplay Programmer Internship at NerdMonkeys - Portuguese indie game studio:

- Developed projects with coworkers from multidisciplinary teams, and alone.

Work done in C# and Unity:

- implemented gameplay systems for different player inputs, player movement and abilities, and enemies AI,
- game and level designing,
- refactoring of an existing C# codebase
- attending weekly meetings.

February 2025

June 2025

4 Month Curricular Internship at Nerd Monkeys

Education

Bachelor's degree in Computer Engineering covering software architecture, databases, networking, and mobile development. Master's in Game Development with focus on real-time systems, event and state driven programming.

2023

2025

Master's in Game Development at Aveiro University

2020

2023

Bachelor's in Computer Engineering at Fernando Pessoa University

Software Engineering Projects

Android Development

Development of android app, as a team of 2, for the [AI4DRR project](#) by sending data (forms and images) with user input to the AI, which automatically creates exposure models suitable for risk assessment.

Work done in Dart and Flutter:

- User localization marker and map markers filters,
- Forms and language translation,
- Notification bar.

<https://github.com/DioNizzio/topography-project>

WEB Development

Development of e-commerce website, as a team of 3, to sell video game keys as products.

Work done using PHP/Laravel (MVC), and SQL database:

- Products dividing pages, like per platform, and categories,
- User profile,
- Product reviews,
- Message, and email sending with PDF receipt systems.

<https://github.com/DioNizzio/ProjetoWeb>

Event-Driven Single-Player to Local Multiplayer Game Refactor

Refactoring of singleplayer game to multiplayer, as a team of 3, using message brokers and an event-driven architecture.

Work done in Java and RabbitMQ:

- Players and game update through local multiplayer up to four screens with message brokers like an event system.

<https://github.com/DioNizzio/ProjetoSD>

Minesweeper - Software Architecture practice

Recreation of the classic minesweeper to practice software architecture concepts and code design.

Work done in C# and Unity:

- Systems separation between Frontend, API, Backend
- Event-driven and state property reactive programming

<https://github.com/DioNizzio/MineSweeper.git>

Game Development Projects

3D Couch Party-Style Game

An internship project of a single-player and multiplayer 3D couch party-style game, where I worked mostly alone, and with a coworker to the end of the internship.

Work done in C# and Unity:

- Game and level design,
- Code and features refactoring,
- Gameplay elements, like player movement, attacks, abilities, player-interactions, and enemy AI,
- Simple animations and UI.

2D VideoGame Development

A master's project of the development of a 2D video game, River Runners, as a team of 4, consisting on a single-player auto-scroller adventure.

Work done in GDScript and Godot:

- Core gameplay mechanics like movement, and abilities,
- Programmed animations for characters and environmental obstacles,
- UI systems like menus, HUD, and abilities cooldown indicators,
- Saving system for levels, audio, and input settings.

<https://misternizzio.itch.io/riverrunners>

Company GameJam

A 4 day game jam with the other studio members, up to 8 people, to integrate the new interns.

Work done in C# and Unity:

- Game and level design,
- Game camera,
- An ability for a level.

Personal Project In Development

A singleplayer bullet heaven survival, where the player faces "rounds" of enemies with magic, and has to fight a boss to win and survive. The game will eventually scale to a story based game but it's still in prototyping.

- Team of 1.

Work done in C# and Unity:

- Player movement,
- Magic system,
- Enemies spawning and behaviour,
- Boss battle (in development)
- UI and art (in development)

<https://github.com/DioNizzio/FantasyGame.git>

Unity Package Documentation

I tested and documented the Unity Localization Package, within the internship, to help the teams incorporate this package in later projects.

Work done in C#, Unity, and Word:

- Create an example scene with usage of the package features,
- Document everything.

Global Game Jam 2025

Development of a fun and casual 2D local multiplayer game, as a team of 3, for the Global Game Jam 2025.

Work done in C# and Unity:

- Game design
- Level and challenges programming
